

ENERGY POLICY

The Directors of Saint-Gobain Insulation UK recognise that the company will seek to continually improve the energy efficiency of site processes. All employees working for Saint-Gobain Insulation UK will be sufficiently trained to understand how their role will enable them to work in accordance with this Policy.

The Company are committed to:

- Identifying and reporting significant energy consumption by process area
- Considering energy performance during the design and procurement of materials, services or assets
- Establishing annual targets for reducing energy consumption whilst maintaining health & safety, environmental and quality standards
- Complying with all legal requirements relating to energy consumption and energy efficiency
- Effectively contribute to the reduction of CO² emissions through the reduction in energy use and misuse
- Training all employees in the awareness and importance of energy management
- Gaining certification to BS EN ISO50001

The Company will annually review energy objectives and targets. Continual improvement in energy performance and the energy management system will be regularly communicated by the Energy Management Team and displayed on the Energy Management Board.

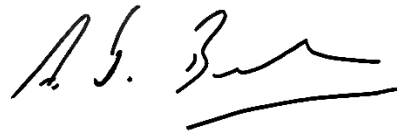

Saint-Gobain Insulation UK, as a part of the global Saint-Gobain Group, are committed to contributing towards reducing the energy consumption of Group activities through their EHS2025 and CARE:4 programs.

This Energy Policy statement is reviewed on a two yearly basis and will be communicated to all persons working for Saint-Gobain Insulation UK. It is also available to the public on request.
